

Joseph B. Fay awarded monster contract to rebuild Pennsylvania Turnpike bridge in Beaver County

Oct 24, 2022, 12:56pm EDT

One of the region's largest construction firms has landed its largest individual project contract ever in the region.

Joseph B. Fay, the North Side-based subsidiary of S&B USA, recently was awarded a \$270 million contract from the Pennsylvania Turnpike Commission to take on its Beaver River Bridge project.

The project, slated for a stretch of the Beaver County community of North Sewickley Township, calls for replacing a steel deck truss bridge built in 1953 with "two new parallel cast-in-place segmental bridges."

It's a project expected to total 1,645 feet in length and include new 385-foot bridge spans.

It's the second nine-figure contract award for Joseph B. Fay this year after the company was awarded a \$154 million contract to build the roads and bridges for the new terminal modernization project at Pittsburgh International Airport.

The Beaver bridge project for the turnpike is the largest single project contract Joseph B. Fay has ever received but corporate parent S&B USA has been awarded larger projects, some of more than \$1 billion, in other parts of the country.

Fay President Ryan Surrena noted of the turnpike project: "It's great to have another project within an hour of S&B USA's corporate headquarters on the North Shore of Pittsburgh."

No time frame was provided on when the project is expected to take place.
